This RFC reports on the status of most Network Hosts from October 12
to October 22. (Monday, October 11 was Columbus Day.) During these
two weeks, the general status of these Hosts remained as it had been
previously.

The table on the following page summarizes the daily information on
Host status for this period.

where

    D = Dead (Destination Host either dead or inaccessible [due to
    network partitioning or local IMP failure] from the BBN Terminal
    IMP.)

    R = Refused (Destination Host returned a CLS to the initial RFC.)

    T = Timed out (Destination Host did not respond in any way to the
    initial RFC, although not dead.)

    H = 1/2 Open (Destination Host opened a connection but then
    either immediately closed it, or did not respond any further.)

    O = Opened (Destination Host opened a connection and was
    accessible to user.)

    * The UCLA IMB-360/91 currently has Remote Job Service (NETRJS),
    but has not implemented a full server Telnet System. The BBN
    Terminal IMP is not equipped to test NETRJS however, we are
    assuming that receipt of the UCLA explanatory message indicates
    that NETRJS is also functioning.

    # These sites advertise that they may not have their system
    available at these times.
